SystmOne Community Hospital

SystmOne Community Hospital is a complete clinical and administrative system for use across all departments, creating a seamless patient journey.

The following functionality is available as one single system or individual functionality can be added or removed depending on each hospital’s requirements.
SystmOne: Community Hospital

PAS

- Use quick and simple clinical coding including ICD10 and OPCS 4 and view real time display of current HRG group code.
- Automatically send free SMS messages to patients, either individually or in bulk.
- Integrate fully with Choose and Book.
- Use comprehensive waiting list and appointment booking functionality to schedule patients for clinics and surgery and also view DNAs.
- Record communications quickly and simply using scanning document workflow with full OCR.

Shared Care

- With patient consent, gain instant access to the patient's SystmOne GP full medical record, including medication.
- Notify SystmOne GPs via tasks if their patients’ records are accessed by secondary care services.
- Automatically check drug interactions and sensitivities when prescribing new medicine.

Resource Scheduling and Pathways

- Identify services which are causing bottlenecks and predict capacity issues.
- Configure generic or patient specific pathways.
- Order tasks on a patient pathway.
- Schedule all events across the hospital with one click.

Bed Management

- See a clear and simple graphical representation of every bed on the ward via a touch-screen.
- Be notified when an action is required for a particular patient, e.g. pathology results.
- Manage gender breaches.
- Alert clinicians to unique conditions or requirements.
- Anonymise patient data on public screens.
- Quickly view vital clinical information, e.g. nil by mouth patients.
Dashboards

- View a real-time overview of the whole hospital all on one screen.
- Set alerts for when a dashboard target reaches a certain figure and configure the levels to correspond with traffic-light signals.
- Receive alerts via a SystmOne task or SMS text message when targets are exceeded.

Handover

- Maintain historic recorded data during a handover.
- Have a clear view of which clinicians are responsible for which patient at any time.
- Handover multiple patients at the click of a button.

Discharge Letters

- Automatically generate a list of required letters using SystmOne PAS or ADT messaging.
- Send electronic discharge letters to all GP system suppliers within 24 hours of discharge.
- Create a variety of letter templates.
- Automatically populate clinical or demographic data into the letter.
- Gain accurate recordings of take-home medication at the point of composing the letter.

Prescribing and Countersigning

- Order and administer drugs all within SystmOne.
- Monitor a patient’s medication via a drug chart.
- Choose a variety of medication methods, from regular drugs to delayed dosage.
- Prescribe at the patient bedside using a laptop or tablet PC.
- Use countersigning for controlled drug prescription and clinical data entry.
